RainCheck: Preliminary Ward-Level Heat Stress Index — Mumbai

Heat Stress Index (relative score)

raincheck_master_temp_QAjoined

- 0.196 - 0.355
- 0.355 - 0.401
- 0.401 - 0.455
- 0.455 - 0.496
- 0.496 - 0.865

Method: Equal-weight composite of normalized land-surface temperature, inverse NDVI and population exposure.

Interpretation: Scores are relative across the wards analysed. They are not probabilities of heat impacts or validated predictions.

Period: June 2026.

Data: MODIS land-surface temperature, NDVI and population raster layers. Full source details and processing steps should be documented in the methodology.
